1. Introduction

1.1 Power Supply Overview

This product has the feature such as high efficiency and high reliability, and it also has the protection function such as short-circuit protection, over voltage protection and over current protection.

1.2 Applicable Documents

The products choose the standards as following for design verification test (but no limited).

GB/T 2423.1-01
Basic environmental testing procedures for electric and electronic products Tests A: Cold

GB/T 2423.2-01
Basic environmental testing procedures for electric and electronic products Tests B: Dry heat

GB/T 2423.3-93
Basic environmental testing procedures for electric and electronic products Test Ca: Damp heat, steady state

GB/T 2423.4-93
Basic environmental testing procedures for electric and electronic products Test Db: Damp heat cyclic

GB/T 2423.5-95
Environmental testing for electric and electronic products. Part 2: test methods. Test Ea and guidance: Shock

GB/T 2423.6-95
Environmental testing for electric and electronic products. Part 2: Test methods. Test Eb and guidance: Bump

GB/T 2423.8-95
Environmental testing for electric and electronic products. Part 2: Test methods. Test Ed: Free fall

GB/T 2423.10-95
Environmental testing for electric and electronic products. Part 2: Test methods. Test Fc and guidance: Vibration(Sinusoidal)

GB/T 2423.11-97
Environmental testing for electric and electronic products. Part 2: Test methods. Test Fd: Random Vibration wide band, general requirements.

GB/T 2423.22-87
Basic environmental testing procedures for electric and electronic products. Test N: Change of temperature

GB 4943-2003
Safety of information technology equipment

GB 17625.1-1998
The limits for the harmonic current emissions caused by low-voltage electrical and electronic equipments(equipment input current ≤ 16A per phase)

GB/T 17626.2-1998
Electromagnetic compatibility-Testing and measurement techniques-Electrostatic discharge immunity test

GB/T 17626.4-1998
Electromagnetic compatibility-Testing and measurement techniques-Electrical fast transient/ burst immunity test

GB/T 17626.5-1998
Electromagnetic compatibility-Testing and measurement techniques-Surge immunity test

GB/T 17626.11-1998
Electromagnetic compatibility-Testing and measurement techniques-Voltage dips, short interruptions and voltage variations immunity tests
2 Electrical Specification

2.1 AC Input

2.1.1 Input Voltage

Table 1: Lists the AC input operating voltage range. The power shall work normally and meet all electrical requirements throughout this range.

<table>
<thead>
<tr>
<th>Minimum</th>
<th>Nominal</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>100Vac</td>
<td>110Vac/220Vac</td>
<td>240Vac</td>
</tr>
</tbody>
</table>

2.1.2 Input Frequency

Table 2: List the AC input operating frequency range. The power shall work normally and meet all electrical requirements throughout this range.

<table>
<thead>
<tr>
<th>Minimum</th>
<th>Nominal</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>47Hz</td>
<td>50Hz/60Hz</td>
<td>63Hz</td>
</tr>
</tbody>
</table>

2.1.3 Inrush Current

Peak inrush current shall be limited to 50A of rated input voltage and cold start at 25 degrees C, and shall not result in a permanent damage of the power supply under any conditions of load and input voltage as specified at any input voltage as specified in table 1.

2.1.4 Input Current Limiting

The input current should be less than 1A, under minimum AC input and full load.

2.1.5 Efficiency

The power supply efficiency shall be greater than 79% under rated input voltage. It will be measured at the typical load and maximum load.

2.2 Output Specification

2.2.1

The DC output voltages will remain within the regulation ranges shown in Table 5 when measured ate the load end of the output connectors.

The voltage regulation limits do not include the transient DC load changes, which are covered in Section 2.2.4.
### 2.2.2 DC Output Current

Table 4: DC output current limits

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Min Current</th>
<th>Rate Current</th>
<th>Max Current</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>V1:5V</td>
<td>0</td>
<td>8</td>
<td>—</td>
<td>A</td>
</tr>
</tbody>
</table>

### 2.2.3 Output Ripple and Noise

The following table 5 is output ripple and noise requirements, it will be met throughout the load ranges specified in Section 2.2.2 and under all input voltage conditions as specified Section 2.1.1. Measurements will be made with an oscilloscope set to 20MHz bandwidth limit. The outputs will be bypassed with one 0.1uF multilayer (type X7R) and one 10uF tantalum electrolytic (low ESR) capacitors.

Table 5: Output ripples and noise limits

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>V1:5V</td>
<td>120mVp-p@25 degrees C</td>
</tr>
</tbody>
</table>

### 2.2.4 Output Dynamic Load Response

The output voltages will remain within specified regulation limit of the nominal set voltage for changes in load as specified below under the following load steps defined below table 8. At a slew rate of 0.1Amps/µS between 50Hz to 10 KHz.

Table 6: Output dynamic load response limits

<table>
<thead>
<tr>
<th>Dynamic Load</th>
<th>DC Voltage Regulation</th>
</tr>
</thead>
<tbody>
<tr>
<td>50%~100%~50%</td>
<td>±3%</td>
</tr>
</tbody>
</table>

### 2.2.5 Overshoot at turn-on/ turn-off

Any overshoot at turn on or turn off shall be less than 10% of rated output voltage.
2.3 **Protection Function**

2.3.1 **Short Circuit Protection**

An output short circuit is defined as any output impedance of less than 0.1 ohms. The power supply will protect without damage to overseers of the unit (components, connectors, etc) under the input conditions specified in Section 3.1 above.

2.3.2 **Over Current Protection**

The power supply shall meet the limitation requirement as below table without any damage, the unit shall recover and function automatically after the protection is removed.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Max</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>V:5V</td>
<td>9.5</td>
<td>A</td>
</tr>
</tbody>
</table>

2.4 **Timing**

2.4.1 **Hold up Time**

Hold-up time no less than 5mS at 100Vac/47Hz input and no less than 10mS at 110/220Vac/50/60Hz input, the output loading should be set up with full load during the test.

2.4.2 **Start up Time**

Start up time no more than 3 seconds at 100Vac/47Hz input and no more than 3 seconds at 110/220Vac/50/60Hz, the output loading should be set up with full load during the test.

3 **Environment Requirement**

3.1 **Temperature**

Operating Ambient: 0°C~40°C

Non-operating Ambient: -10°C~+85°C

3.2 **Humidity**

Operating: 25%-90% relative humidity (Non-condensing)

Non-operating: 10%-90% relative humidity (Non-condensing)

3.3 **Altitude**

Operating: 2000 meters

Non-operating: 2000 meters
4 Reliability

4.1 MTBF (MIL-HDBK-217F)

MTBF no less than 50K hours (25 degrees C, Full load and rated voltage input)

4.2 Burn-in and Life test

IKYK shall discuss with customer to make sure the power in house Burn-In and life test procedures.

5 Product Safety Requirement

5.1 Standard

Meet IEC60950-1 (information technology and similar electric apparatus -safety requirement) standard requirement.

5.2 Leakage Current

Leakage current shall not exceed 0.25mA at 220Vac/50Hz.

5.3 Insulation Resistance

-Primary to Secondary: 50 Meg. Ohms min. 500VDC

5.4 Dielectric Strength Testing

Hi-pot test shall be met the table 8 requirements, an item listing this test as a 100% production test must be performed and be maintained at that level for a minimum of 3 seconds without failure.

Table 8: Hi-pot test

<table>
<thead>

7 Statement

7.1 This specification for approval has two copies, one for customer, and the other for provider. It comes into effect after approval this specification by customers.

7.2 If specification for approval need to update, it's made an agreement after discuss between customer and provider.
