## 12. PRECAUTION FOR USING

### 12.1 HANDLING

- 1) Refrain from storing mechanical shock and from applying any force to LCD MODULE.  
It may cause mis\_operation or damage of LCD.
- 2) Do not touch, press or rub the display panel with a hard, stiff tool or object as the polarizers in the panel are easily scratched.
- 3) If LCD is broken and liquid crystal material flow out, ingestion, inhalation, or contact with skin should be avoided. If liquid crystal material contact with skin, wash immediately with alcohol and rinse thoroughly with water.
- 4) Never use organic solvents to clear the display panel as these solvent may adversely affect the polarizer. To clean the display panel dampen a bit of absorbent cotton with petroleum benzene and gently wipe the panel, or contaminations by using a scotch tape.
- 5) Refrain from discharge of high electro-static voltage, it will damage C-MOS LSI in the MODULE.
- 6) Do not leave the MODULE in high temperature, especially in high humidity for a long time. It is recommended to store the MODULE where the temperature is in the range of 0°C to 35°C and the humidity is lower than 70%.
- 7) Store the MODULE without exposure to direct sunlight or fluorescent lamp.
- 8) Ultra violet cut filter is necessary for outdoor operation.
- 9) Avoid condensation of water, it may cause mis-operation or disconnection of electrode.

### 12.2 OPERATION

- 1) Never connect or disconnect the LCD MODULE from the main system while power is being supplied.
- 2) When supplying the M signal from the external unit to a GRAPHIC MODULE, set the duty to 50% ±1%.  
If the duty deviates too greatly from the value, a DC voltage will be applied to the liquid crystal, which could induce an electrochemical reaction and reduce the life of the MODULE.
- 3) Do not exceed the maximum rating values under the worst conditions taking account of the supply voltage variation, input voltage variation, and environmental temperature, etc. Otherwise LCD module may be damaged.
